Subject: WOE and TRV Weighting and other issues
Date: 05/13/2008 02:03 PM

Burt,

On Eric's issue list it states that the TRV weighting for the WOE framework has been resolved. How was this resolved and how are they proposing to modify the WOE framework to account for this? At what scale will this be done (it is already presented at a gross scale)? How will their determinations be reviewed / agreed upon, and will there be an interim step or will we be seeing it for the first time in the BERA?

Also, what about the issues not listed in this summary table? Is there another list?

-Jennifer
